

OPTICAM 2023.2

New developments

Mirror feature

One or more machinings can now be mirrored about an axis or surface.

SolidWorks configurations

OPTICAM now supports working on different configurations in SolidWorks. You can switch between the configurations at will.

Triangular attachment

New function for programming triangular attachments. For the time being for AC Uniqua and AC Vision machines. Other models will follow.

Toolpaths

A new setting makes it possible to keep the toolpaths visible.

Feature recognition

When working on surfaces with starting holes, the detection of the correct cutting side has been optimized.

Open explorer

New function, with which the path of the NC file can be opened directly after the NC run.

Translation

Polish translation and revision of other languages.
